***Tony Del Genio
NASA GISS***

ISCCP 25th Anniversary Symposium

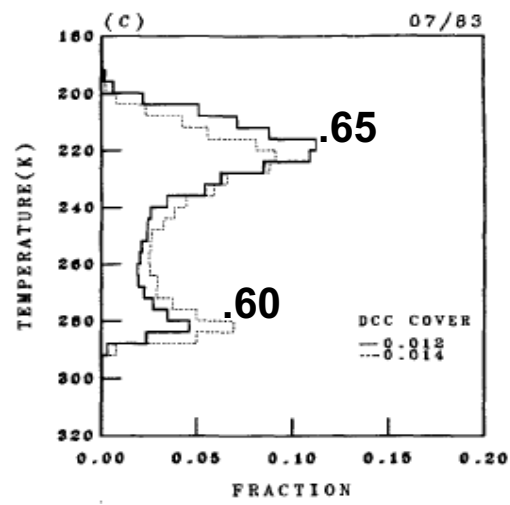

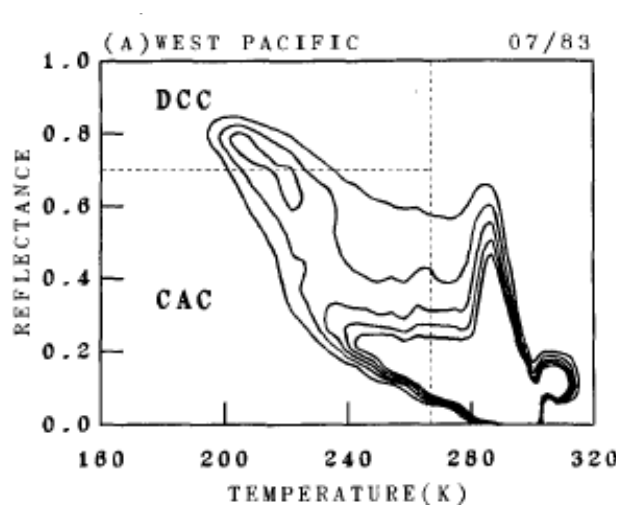

Arakawa and Schubert (1974)

ISCCP Pilot Dataset

(Del Genio and Yao (1987))

**Fu et al. (1990):
ISCCP B3 vis-IR
deep convective
cloud ID**

**Convection not
entirely defined by
threshold 27°C SST;
regulated by surface
convergence**

And now for something completely different...

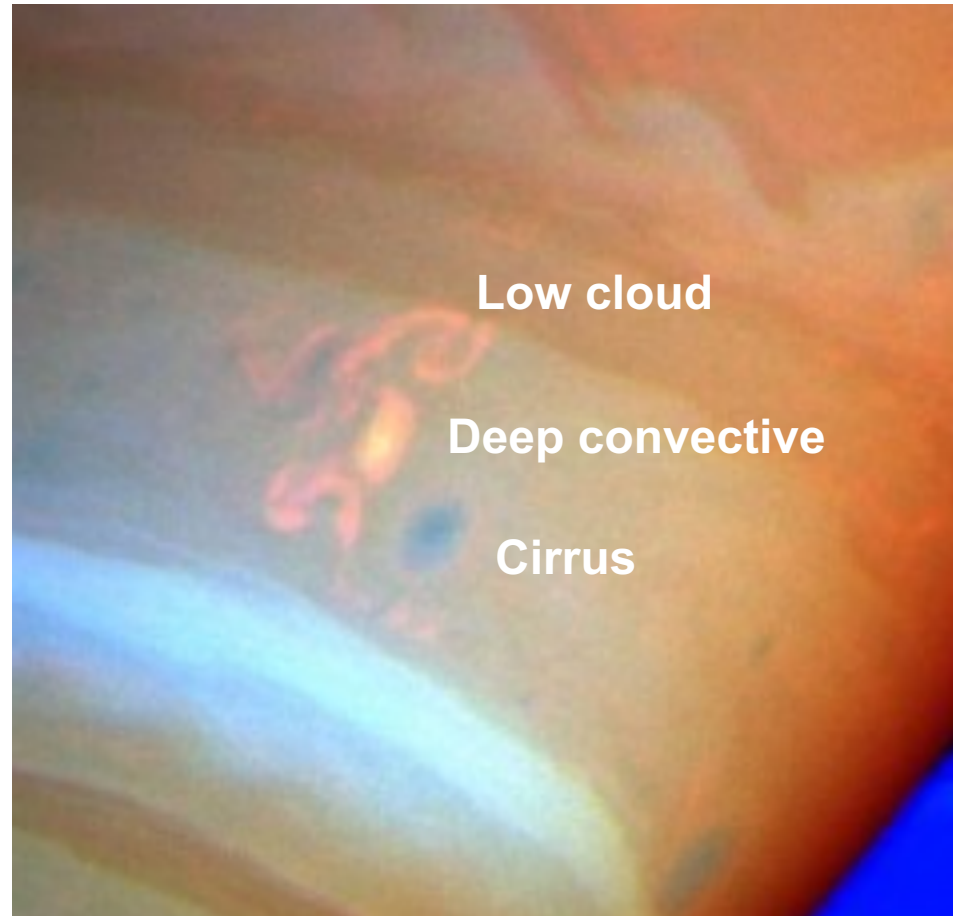

Saturn

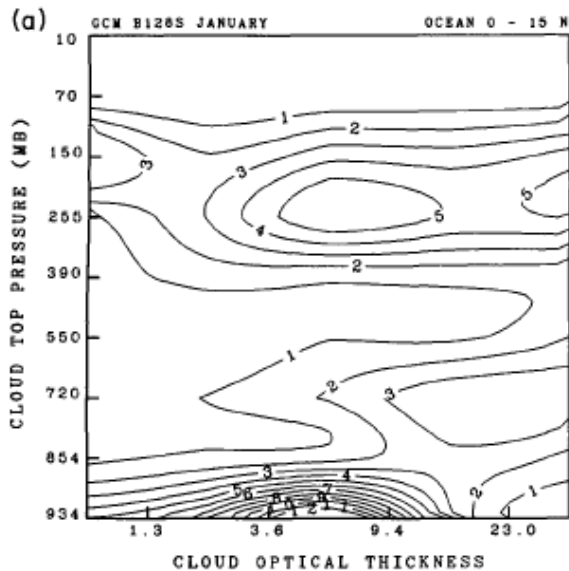

**CH₄
band**

Continuum

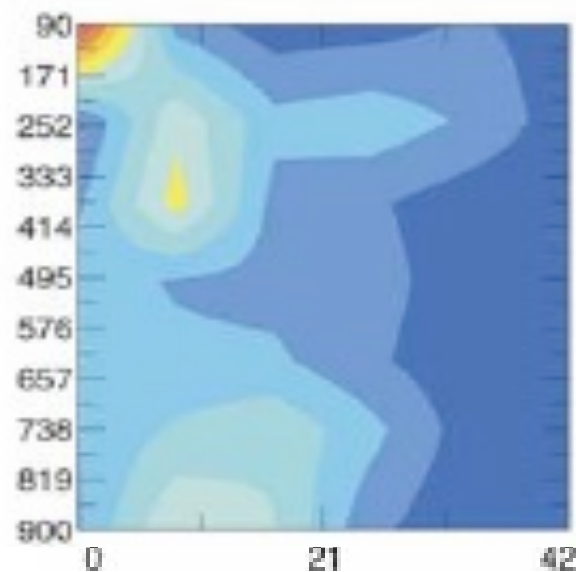

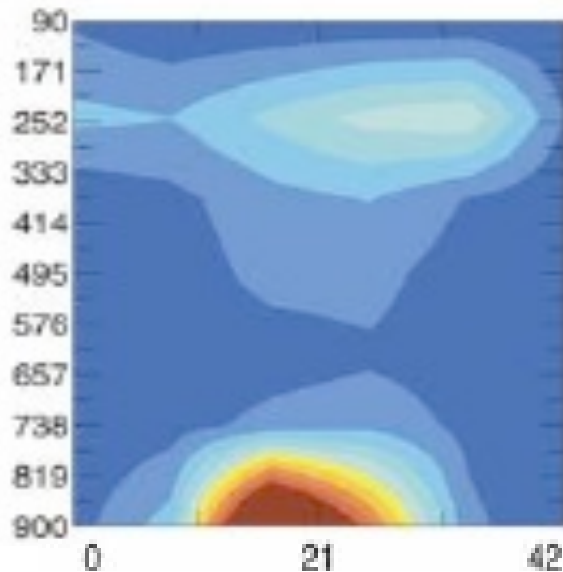

**ISCCP-like 2-filter detection
of deep convection**

**Del Genio et al.
(1996):
GISS Model II with
prognostic cloud
water + homemade
simulator**

vs. ISCCP C1

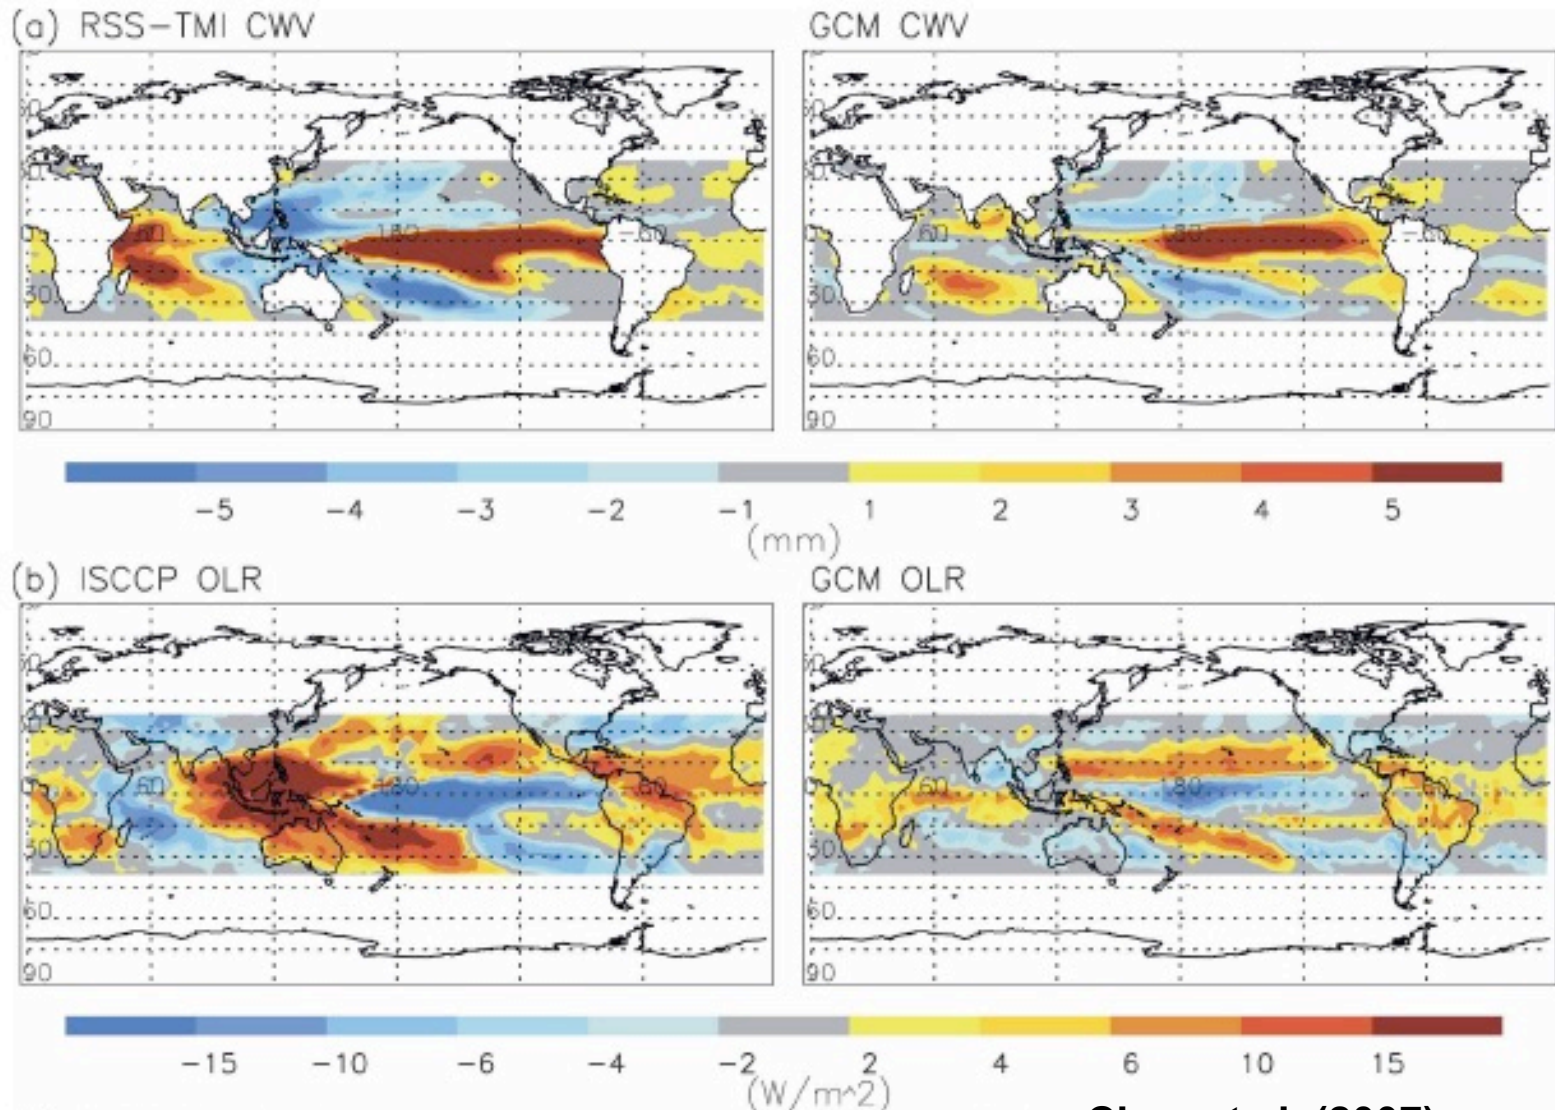

**Schmidt et al.
(2006):
GISS Model E +
ISCCP simulator**

vs. ISCCP D1

**The more things
change...**

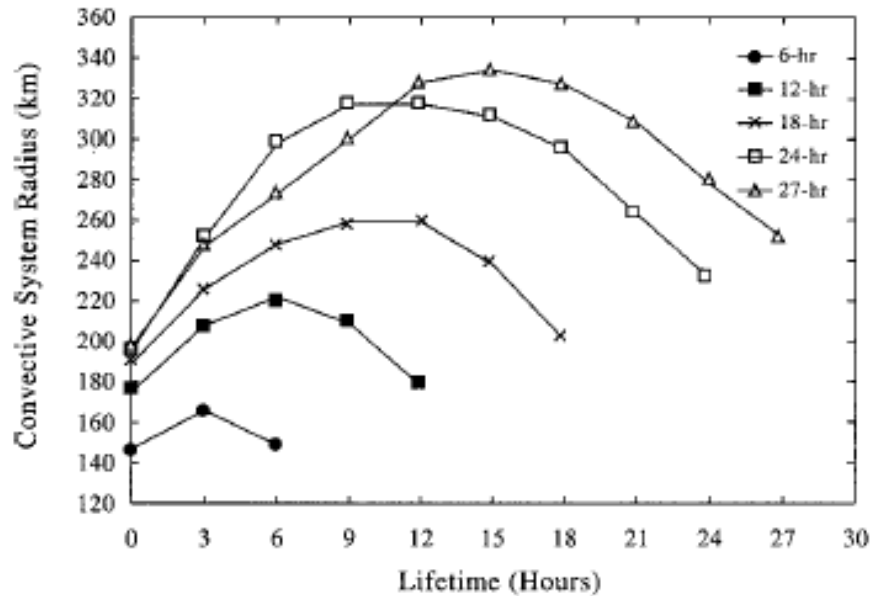

Long-term ISCCP FD flux time series: Climate variability

Many ENSOs, almost up to PDO scale

Chen et al. (2007)

(a)

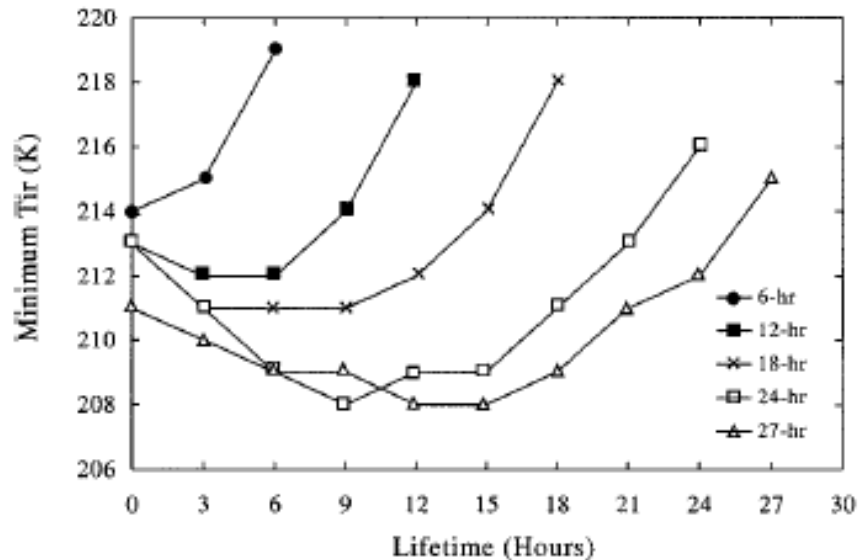

Things you can do only with geostationary data:

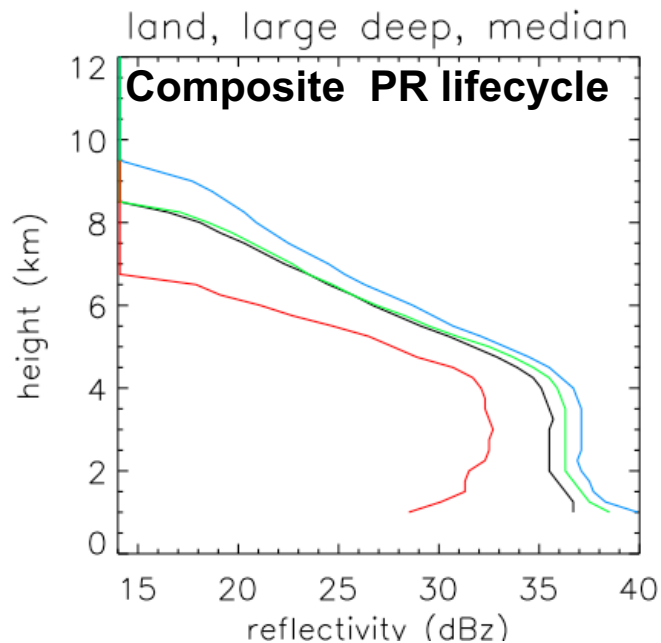

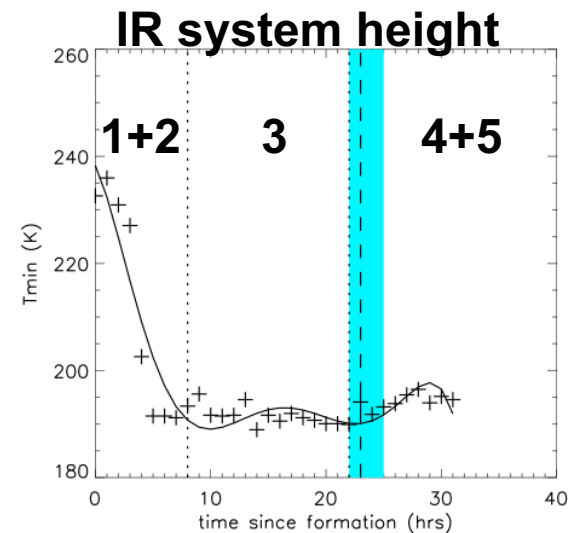

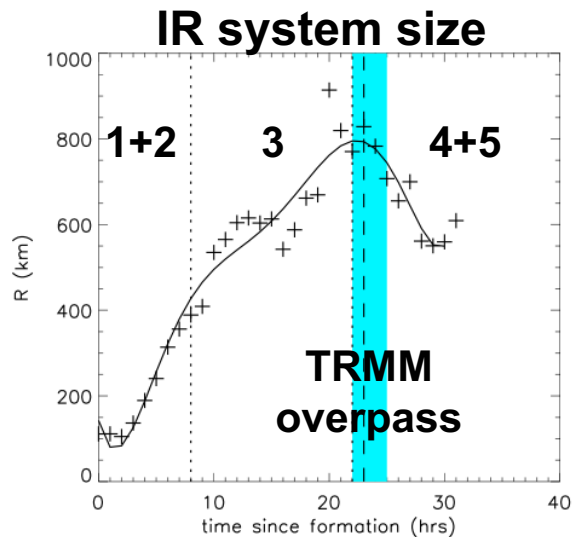

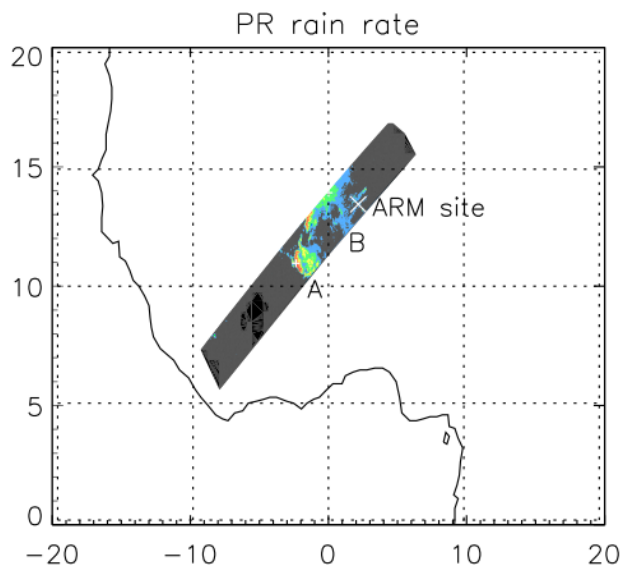

Tropical mesoscale convective system lifecycle statistics using ISCCP B3 data

(Machado et al., 1998)

(c)

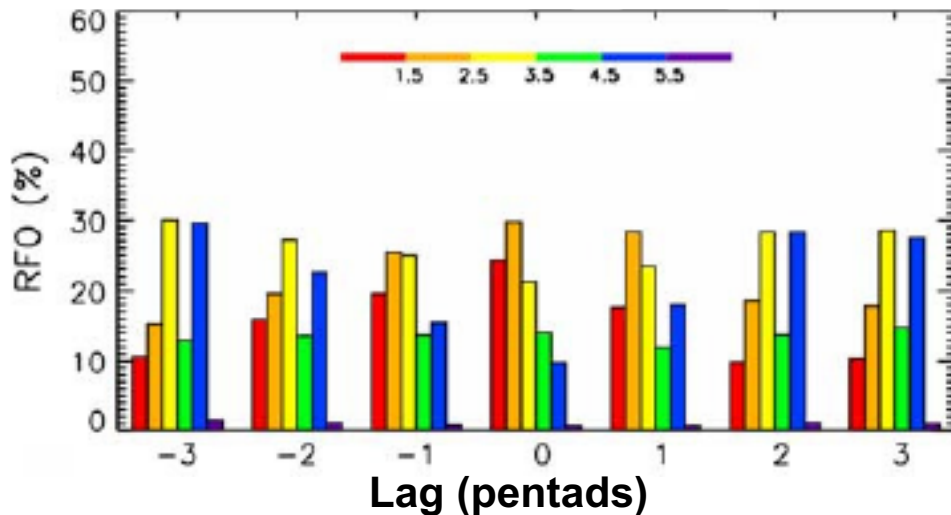

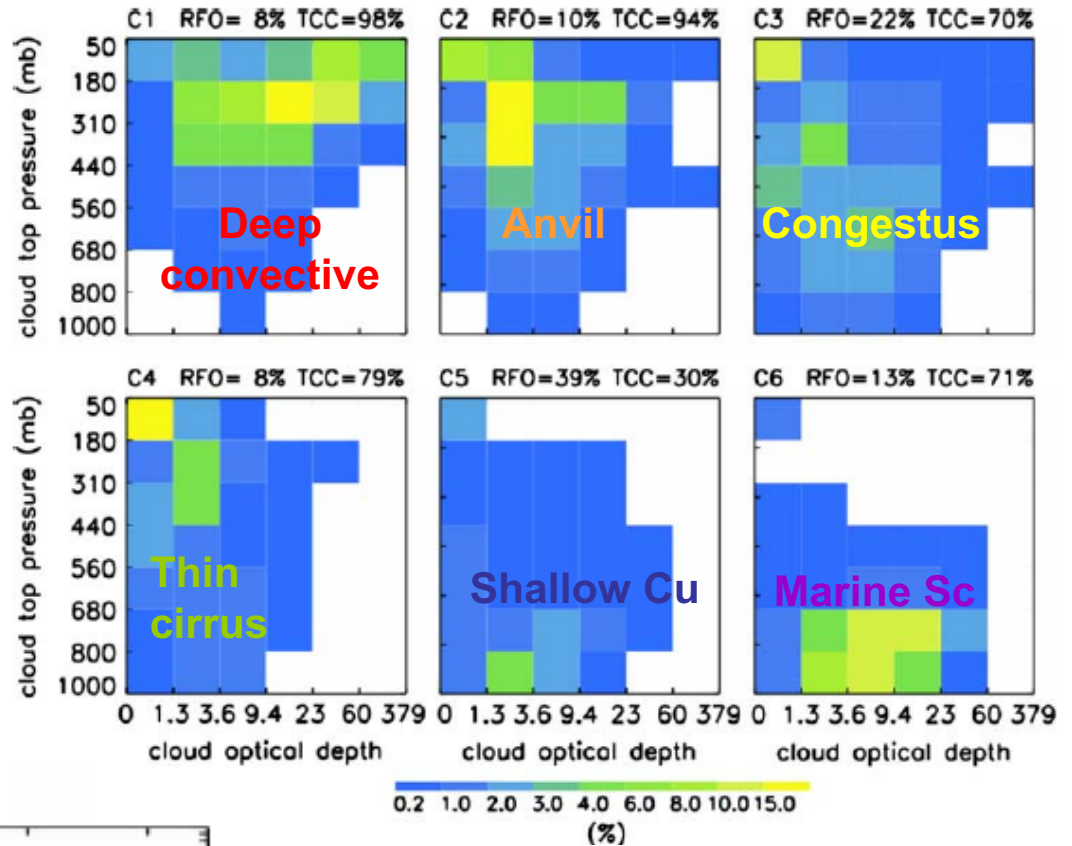

Composite lifecycle information from non-GEO data

- 1+2 **Developing**
- 3 **Mature**
- 4 **Dissipating**
- 5

(Futyan and Del Genio, 2007)

ISCCP “cloud regimes” defined by K-means clustering algorithm for 15°N-15°S (Rossow et al., 2005) applied to optical thickness – cloud top pressure histograms

MJO variability of cloud regimes (red = deep convective, orange = anvil, yellow = congestus, green = thin cirrus, blue = shallow Cu, violet = marine Sc)

(Chen and Del Genio, 2008)

ISCCP

GISS Model E

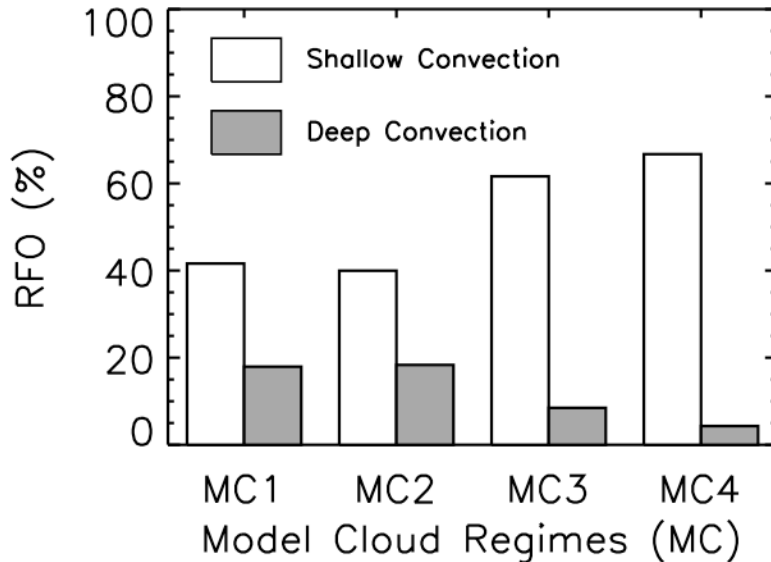

MC1

Deep convective

MC3

Shallow convective

Chen and Del Genio (2008)

GCM has cloud clusters that resemble ISCCP “deep” and “shallow” convective clusters

But actual deep/shallow convection occurrence in GCM is spread across clusters

Scattered Cu
~10% cloud

Cu rising into
Sc: ~50% cloud

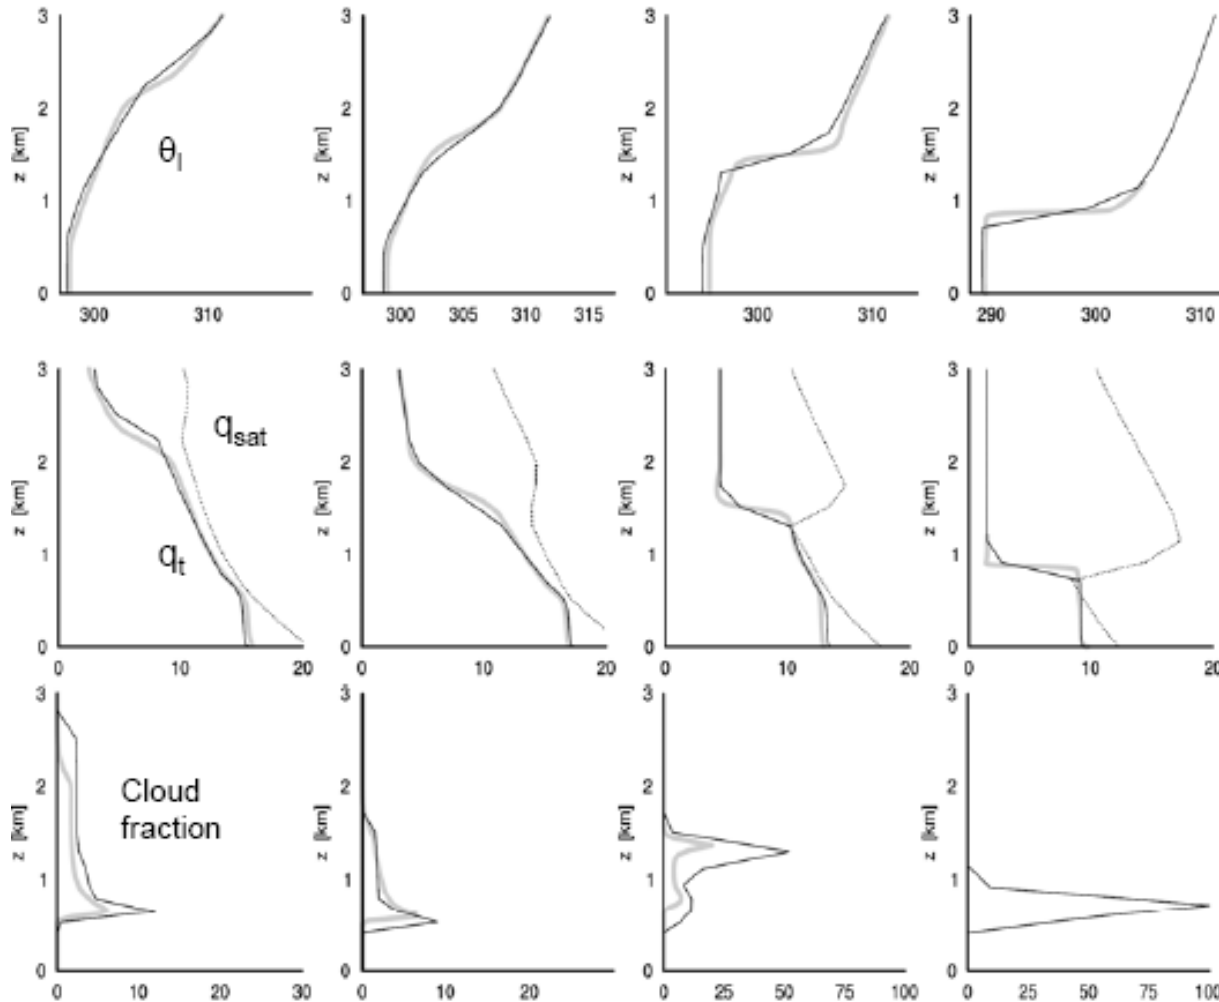

Sc
Overcast

RICO
Precipitating

BOMEX
Non-precipitating

ATEX

DYCOMS2

Ultimately, we should cluster on thermodynamic structure and dynamical characteristics of the atmosphere and see what clouds we get... not clear that reanalyses are up to the task in the tropics yet

(Siebesma, 2008)

Summary

- **Many things we now take for granted about the global behavior of convective cloud systems are the result of ISCCP**
- **Approach to dataset not fully appreciated at the beginning, now a staple of GCM evaluation efforts**
- **Long time series invaluable for comparisons with other climate parameter records, characterizing climate variability: ENSO, soon PDO?**
- **Innovative data analysis techniques strengthening the link with dynamics – much more to be done in providing temporal evolution context for non-GEO datasets**
